

Harvard, Princeton, Library of Congress, Springer, DFG, Federal Press Office, Leica...

This is just a small selection of the organizations we work with. We develop intelligent and market-leading software solutions that are used in large digitization projects and for press monitoring. Our customers include the world's most renowned and advanced companies and institutions, including media houses, research institutions, blue chip companies, federal ministries, and 14 national libraries.

For our location in Bucharest we are looking for a

Software Developer (m/f)

Our candidates

- Should be responsible for the development of software modules/features according to the specifications/requirements of the project manager.
- Will be working with C++/C# as the main programming, using SCRUM methodology, issue-tracking and requirements management tools, continuous-integration systems (experience is mandatory)
- Should be responsible for writing and testing primary code, design specifications for new features
- Should be able to fulfill planning tasks according to the current "sprint" (collection of the tasks to be solved within a precisely needed time interval)

We offer

- Possibility to work in a young and enthusiastic team with professional leadership and flexible working hours
- Personal development programs (trainings/certifications)
- International projects with high-impact software products
- A motivating salary package
